# Visitor Management System (VMS)

- Software electronically monitors and records information about visitors.
- Make the visitor sign-in process more efficient, accurate, and consistent, provide the ability to store visitor information in a database.
- Increases building security and protects facilities and employees.
- Installed on an existing personal computer that's already at the receptionist's desk or it can be deployed on a self-service kiosk.

Manual (Traditional)

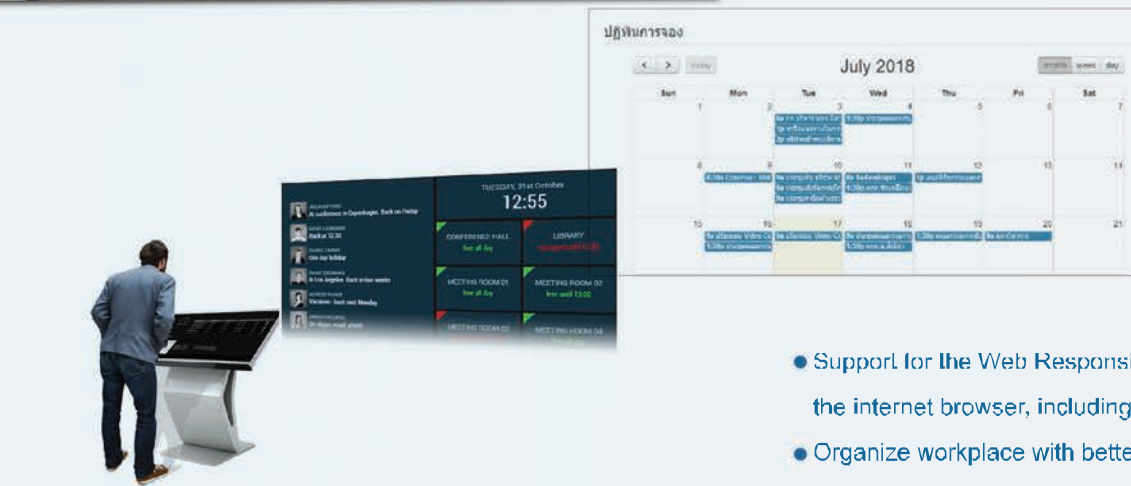

Self-Service Kiosk

## Meeting Room Reservation

The screen shows an overview of all meetings.

- Support for the Web Responsive platform through the internet browser, including iOS and Android applications
- Organize workplace with better efficiency. Works seamlessly with organization's email system
- Electric systems can be controlled to save energy through the "Building Automation System" or the "Room Automation System"
